

## NOTES

NTC1: configured as thermometer  
Resistance measuring range: 100  $\Omega$  to 100 k $\Omega$   $\pm$  50  $\Omega$   
PUSHBUTTON SW1: configured as pushbutton switch (can be configured as reed / status switch)  
SIGNAL SOURCE: configured as analog input.  
Voltage measuring range: 0 to 26 Vdc  
Type: single-ended  
Resolution: 12 bits  
Accuracy: 0.1 % of full scale (20 to 30 °C)  
Input impedance: > 16 k $\Omega$   
Input isolation: not isolated  
Normal Mode Rejection: 50 dB at 60 Hz  
Conversion time: 1250 milliseconds typical  
IMPULSE COUNTER: configured as impulse counter.  
Input frequency: 200 Hz (per channel)  
Sample rate: 400 Hz (per channel)  
Pulse On Time: > 2.5 milliseconds
